

FAQ

Q. Is there any downtime associated with an Infusion Peel™ procedure?

A. There is no down time, in fact you may even be able to schedule a treatment during your lunch break.

Q. Is it painful?

A. This procedure feels cool, soothing and is pain free, providing you with a relaxing escape from your busy schedule.

Q. How soon can I expect to see results?

A. The results are immediate with better tone and clarity being noticeable right after the procedure. Your skin will become smoother and healthier which will become even more noticeable days after the procedure.

Q. I have dark skin, will it work for me?

A. Unlike some laser treatments, an Infusion Peel™ is appropriate for all skin types and colours.

Q. Can this procedure help reduce the signs of ageing?

A. Yes, particularly when a series of treatments is performed followed by regular maintenance visits.

Q. Can an Infusion Peel™ help deep clean my pores?

A. Yes, it will provide deep cleansing of the skin as the peeling process removes much of the bacteria embedded in the pores of your skin.

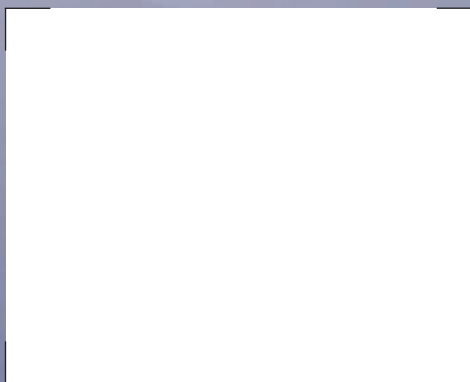

Q. How many Infusion Peel™ treatments will I need to treat my skin condition?

A. Your skin care professional will fully evaluate your particular skin condition and make recommendations on the number of treatments and the frequency of visits to ensure optimal results.

Delivering Advanced Combination
Skin Rejuvenation Treatments

PEEL

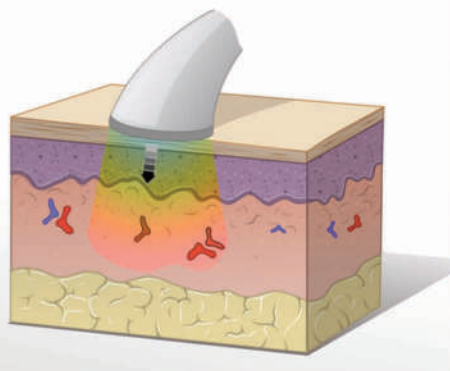

1 Gentle and effective removal of the outer layer of the skin using a disposable exfoliating tip.

INFUSE

2 Dermis is penetrated with super-hydrating topical agents using the disposable smooth applicator tip.

HEAL

3 LED Light therapy using Coolbreeze™ wands promotes collagen, reduces inflammation & improves acne prone skins.

ACCELAFUZE™

The introduction of a new concept in the management of skin ageing

AccelaFuze™ is an exciting new treatment platform to reduce the signs of skin ageing that combines the proven benefits of microdermabrasion with Accela™ Infusions, the most scientifically advanced infusions available today.

The AccelaFuze™ Infusion Peel™ is the latest and most effective treatment offered today. The scientifically designed infusion solutions are a brand new concept in skin ageing, enhancing all skin types and skin conditions to provide a positive rejuvenating effect.

Three-Stage Treatment Process

The Infusion Peel™ combines three treatments in one session. First you will experience a crystal-free exfoliation of the outermost layer of your skin, revealing a fresher looking skin which has prepared the skin for the dermal infusion. A vacuum-assisted applicator tip is used to drive the infusion formula deep into the skin for more dramatic results. The infusion process is cool, soothing and extremely effective as the newly refined surface of the skin "drinks in" the nutrients of the infusion. The final element of the treatment is the high intensity LED light therapy, delivered using the CoolBreeze™ wands. The light therapy promotes collagen stimulation, suppresses inflammation and reduces irritation of the skin. LED Light therapy has also been clinically proven to treat acne.

Accela™ Infusion Solutions:

The three infusion solutions have been scientifically developed to treat different skin types including dry, oily, acne prone and ageing skin.

Peptide Replacement Infusion™

This infusion is a highly effective anti-ageing treatment to combat fine lines and wrinkles, superficial age spots and sun damaged skin. Containing a combination of peptides, amino acids, and vitamins to promote collagen and elastin production, this infusion will promote beautiful, more radiant skin with no downtime.

Moisturising Infusion™

A gentle combination of aloe, green and white tea and grape seed anti-oxidants, this infusion helps the skin retain its moisture content to improve the skin rejuvenation process. The skin looks immediately plumped and revitalised after this procedure.

Pigment Lightener Infusion™

This infusion has been created to help repair sun damaged and pigmented skin. The formula contains active, natural ingredients to suppress the pigmentation process in the skin and acts as an effective lightening agent.
